Instructions

• Use black ink or ball-point pen.
• Fill in the boxes at the top of this page with your name, centre number and candidate number.
• Answer all questions.
• Answer the questions in the spaces provided — there may be more space than you need.
• You must show all your working.
• Diagrams are NOT accurately drawn, unless otherwise indicated.
• Calculators may be used.
• If your calculator does not have a π button, take the value of π to be 3.142 unless the question instructs otherwise.

Information

• The total mark for this paper is 80
• The marks for each question are shown in brackets — use this as a guide as to how much time to spend on each question.

Advice

• Read each question carefully before you start to answer it.
• Keep an eye on the time.
• Try to answer every question.
• Check your answers if you have time at the end.

</table>

Mr Edwards and his 3 children go to the cinema.

It is cheaper for Mr Edwards to buy 1 family ticket rather than 4 separate tickets.

(a) How much cheaper?

\[
7.80 + 3(5.80) = £25.20
\]

\[
25.20 - 24.30 = £0.90

$BCD$ is a straight line.

$ABC$ is a triangle.

Show that triangle $ABC$ is an isosceles triangle.

Give a reason for each stage of your working.

\[ \hat{ACB} = 180 - 117 = 63^\circ \quad \text{Angles on a straight line add to } 180^\circ \]

\[ \hat{BAC} = 180 - 63 - 54 = 63^\circ \quad \text{Angles in a triangle add to } 180^\circ \]

$ABC$ is isosceles because 2 angles are equal.

16 Chloe has a van.

She is going to use the van to deliver boxes.
Each box is a cuboid, 40 cm by 30 cm by 35 cm.

The space for boxes in the van has

- maximum length: \( \frac{2.4 \text{ m}}{40} = 6 \text{ cm} \)
- maximum width: \( \frac{1.5 \text{ m}}{30} = 5 \text{ cm} \)
- maximum height: \( \frac{1.4 \text{ m}}{35} = 4 \text{ cm} \)

The space for boxes is empty.
Chloe wants to put as many boxes as possible into the van.

She can put 3 boxes into the van in one minute.
Assume that the space for boxes is in the shape of a cuboid.

(a) Work out how many minutes it should take Chloe to put as many boxes as possible into the van.

\[
\frac{240}{40} = 6 \quad \frac{150}{30} = 5 \quad \frac{140}{35} = 4
\]

\[6 \times 5 \times 4 = 120 \text{ boxes}\]

\[\frac{120}{3} = 40 \text{ minutes}\]

\(1\) minutes

The space for boxes might not be in the shape of a cuboid.

(b) Explain how this could affect the time it would take Chloe to put as many boxes as possible into the van.
