1 The scatter diagram shows information about 12 girls.

It shows the age of each girl and the best time she takes to run 100 metres.

(a) Write down the type of correlation.

negative

(1)
Kristina is 11 years old. Her best time to run 100 metres is 12 seconds.

The point representing this information would be an outlier on the scatter diagram.

(b) Explain why.

It is not close to the line of best fit.

Debbie is 15 years old. Debbie says, “The scatter diagram shows I should take less than 12 seconds to run 100 metres.”

(c) Comment on what Debbie says.

15 years is out of the range of the scatter diagram (extrapolation is unreliable).

Here is a trapezium drawn on a centimetre grid.

On the grid, draw a triangle equal in area to this trapezium.

\[
\text{Area of trapezium} = \frac{2+7}{2} \times 4
\]
\[
= 18 \text{ cm}^2
\]

\[
\text{Area of triangle} = 18 \text{ cm}^2
\]

\[
\frac{1}{2} \text{ base } \times \text{ height} = 18

4 When a biased 6-sided dice is thrown once, the probability that it will land on 4 is 0.65.
The biased dice is thrown twice.

Amir draws this probability tree diagram.
The diagram is **not** correct.

Write down **two** things that are wrong with the probability tree diagram.

1. \( P(\text{not land on 4}) \) should be 0.35 \( \text{(1st throw)} \)

2. \( P(\text{land on 4}) \) should be 0.65 \( \text{(on second throw after land on 4)} \)

5. $ABC$ is a right-angled triangle.

(a) Work out the size of angle $ABC$.
Give your answer correct to 1 decimal place.

\[
\cos (ABC) = \frac{7}{11}
\]

\[
ABC = \cos^{-1} \left( \frac{7}{11} \right)
\]

\[
= 50.5 \quad \text{1dp}
\]

The length of the side $AB$ is reduced by 1 cm.

The length of the side $BC$ is still 7 cm.
Angle $ACB$ is still $90^\circ$.

(b) Will the value of $\cos ABC$ increase or decrease?
You must give a reason for your answer.

\[
\cos (\frac{ABC}{20-5}) = \frac{7}{11}
\]

\[
\cos (45.6) = \frac{7}{10}
\]

\[
\frac{7}{10} > \frac{7}{11}
\]

it will increase

There are some counters in a bag. The counters are red or white or blue or yellow.

Bob is going to take at random a counter from the bag. The table shows each of the probabilities that the counter will be blue or will be yellow.

<table>
<thead>
<tr>
<th>Colour</th>
<th>red</th>
<th>white</th>
<th>blue</th>
<th>yellow</th>
</tr>
</thead>
<tbody>
<tr>
<td>Probability</td>
<td>$2x$</td>
<td>$x$</td>
<td>0.45</td>
<td>0.25</td>
</tr>
</tbody>
</table>

There are 18 blue counters in the bag. The probability that the counter Bob takes will be red is twice the probability that the counter will be white.

(a) Work out the number of red counters in the bag.

\[
0.45 \times \text{Total Counters} = 18 \\
\text{Total Counters} = \frac{18}{0.45} = 40 \\
1 - 0.45 - 0.25 = 0.3 \\
2x + x = 0.3 \\
3x = 0.3 \\
x = 0.1
\]

\[P(\text{white}) = 0.1 \]
\[P(\text{red}) = 0.2 \]
\[0.2 \times 40 = 8 \]

A marble is going to be taken at random from a box of marbles. The probability that the marble will be silver is 0.5

There must be an even number of marbles in the box.

(b) Explain why.

Half of the marbles are silver. If there were an odd number divided by 2 is not an integer, you cannot have half a marble.

\[ T = \frac{w}{\sqrt{d^3}} \]

\[ w = 5.6 \times 10^{-5} \]
\[ d = 1.4 \times 10^{-4} \]

(a) Work out the value of \( T \).

Give your answer in standard form correct to 3 significant figures.

\[
T = \sqrt{\frac{5.6 \times 10^{-5}}{(1.4 \times 10^{-4})^3}}
\]

\[
= \sqrt{\frac{5.6 \times 10^{-5}}{1.96 \times 10^{-12}}}
\]

\[
= \frac{5.6}{1.96} \times 10^7
\]

\[
= 2.8 \times 10^7
\]

\[
= 4.5 \times 10^7
\]

\[ T = 4.52 \times 10^3 \] \hspace{1cm} (2)

\( w \) is increased by 10% \\
\( d \) is increased by 5%

Lottie says, 

"The value of \( T \) will increase because both \( w \) and \( d \) are increased."

(b) Lottie is wrong. 

Explain why.

\[
T = \sqrt{\frac{1.1 \times 5.6 \times 10^{-5}}{(1.05 \times 1.4 \times 10^{-4})^3}}
\]

\[
= \sqrt{\frac{1.1 \times 5.6}{1.96 \times 10^{-12}}}
\]

\[
= \frac{1.1 \times 5.6}{1.96} \times 10^7
\]

\[
= 3.7 \times 10^7
\]

\[
= 4.4 \times 10^3
\]

\[ 4.4 \times 10^3 < 4.52 \times 10^3 \]
